

# Prestige escape hatches

RHIGO's Prestige escape hatches have with same allure as our ship's windows and portholes. Together they give an attractive finish to all openings in the ship's hull. The escape hatches are manufactured from polished and anodised seawater resistant aluminium. A grey tinted acrylic is used as glazing, thickness 10 mm. All our escape hatches are CE certified and comply with the NEN-EN-ISO 12216 standard. They can be used in design category A-Ocean. The outside of the hatch is shaped such that any water will run off and no water will come in when the hatch is opened.

## Hinges

Special maintenance free friction hinges ensure that the opening part can be left open at any angle.

## Fixing

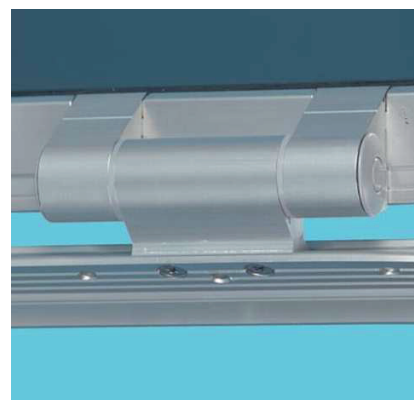

The Prestige escape hatches are screwed to the deck from the outside. When closed, the heads of the fixing screws are hidden from sight by the opening part of the escape hatch.

## Handles

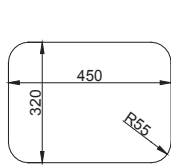

The handles have several functions. They can be locked or unlocked from the inside. When unlocked, the hatch can also be opened from the outside. The hatch can be closed in two positions: fully closed and closed with a ventilation opening. In both cases the hatch can be locked.

## Options

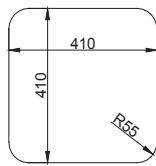

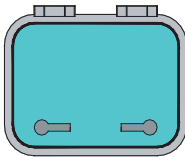

- Acrylic in green, bronze or clear colour.
- Aluminium powder coated in a RAL colour of choice.
- Detachable flyscreen.
