

# Windscreens

RHIGO windscreens are made exactly to size. They can be supplied with a polished and anodised finish or coated in any RAL colour. They are fitted standard with a 5 mm thick hardened glass pane. On request the windscreens can also be supplied with a thicker window pane or other type of glazing.

The windscreen is made near enough watertight by using cover plates on the outside and decorative strips on the inside. The windscreen can easily be folded flat by loosening star-shaped fastenings. The windscreens are supplied as a 3, 4, 5, 6 or 7 piece model depending on the situation on board.

## Hinges

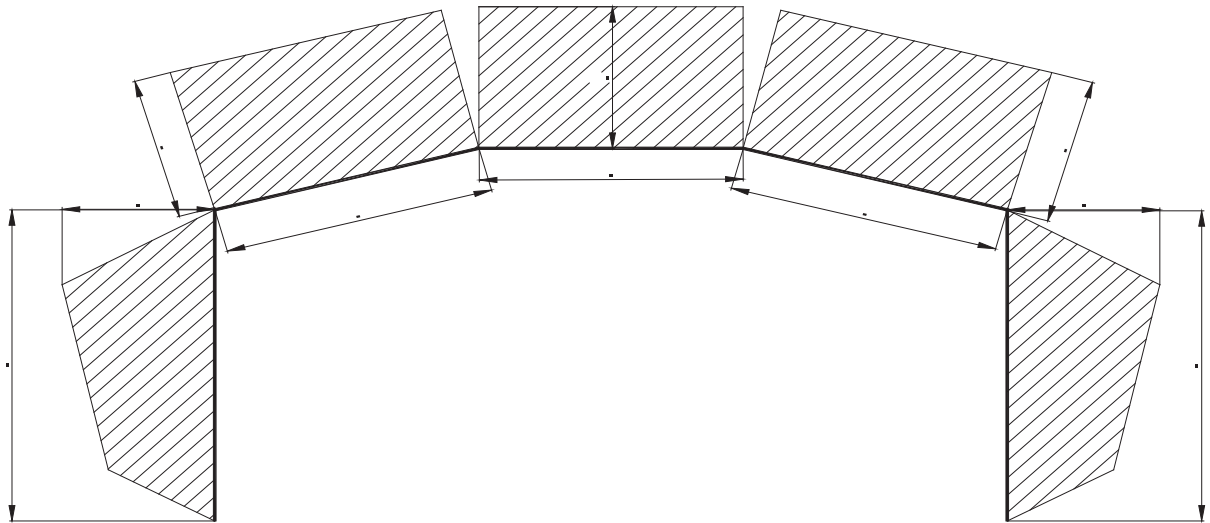

The standard windscreens are designed for folding flat and for removing by using special split hinges. If the parts have to be able to be folded flat but do not have to be removed special stainless steel hinges are fitted. It is also possible to supply the windscreen as a fixed model in certain cases.

## Options

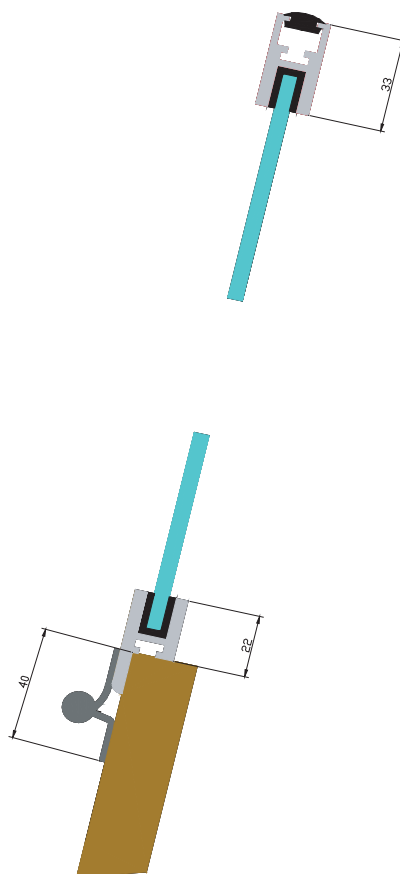

- Tenaxes (press-studs) can be fitted on the outer profile of the windscreen in order to attach a shade or awning.
- Holes for windscreen wiper.
- Various colours of glass such as clear, green, grey, bronze.
- All or some parts folding inwards.
- Fixed type windscreen.
- Powder coating in a RAL colour of choice.
